

CLIENT AGREEMENT

Agreement for: Jacral Ecommerce MVP

Document Type

Prepared For	Client Agreement
Prepared By	Solis of Life Private Limited
Agreement Date	Comfinity Technologies Private Limited
Project Start Date	Aug 31st 2026
Quotation / Development Amount	September 1st 2026
Estimated Timeline	₹25,000
	2 weeks (working days), subject to the terms of this Agreement

1. Project Overview

This Client Agreement ("Agreement") is entered into between Comfinity Technologies Private Limited ("Comfinity" / "Service Provider") and the Client identified below ("Client"), for the design, development and deployment assistance of the Jacral Ecommerce MVP.

The project is a Phase 1 ecommerce MVP comprising a customer-facing website, admin panel, backend application and PostgreSQL database, together with the agreed integrations, basic analytics and deployment assistance described in this Agreement and its attached technical scope.

The detailed technical project document supplied and accepted by the Client shall be treated as the technical scope reference for the project. The Client has confirmed acceptance of the recommended technical approach except that hosting will be provided through the Client's selected Hostinger VPS KVM 1 plan.

2. Scope of Work

For the agreed development fee of ₹25,000, Comfinity will develop the following core components:

- Responsive customer-facing ecommerce website.
- Admin panel/dashboard for core business operations.
- Backend application and APIs supporting the website and admin panel.
- PostgreSQL database hosted on the Client's selected Hostinger VPS environment.
- Razorpay payment gateway integration.
- Customer and administrator authentication, with separate admin access and MFA as agreed.
- Basic ecommerce analytics/dashboard reporting.
- Basic email notifications for order confirmation, shipping and delivery, subject to availability/configuration of the selected email service.
- Basic UTM implementation as defined in this Agreement.
- Deployment assistance for frontend, backend and database, including basic production configuration and domain connection assistance.

3. Detailed Deliverables

3.1 Customer Website

- Home, Shop/Product Listing, Product Details, About, Payment Page, Contact and FAQ pages.
- Privacy Policy, Terms & Conditions, Refund/Shipping Policy pages using Client-provided legally appropriate content.
- Cart, checkout and order confirmation flow.
- Responsive design for desktop and mobile.
- Product catalogue with images, pricing, stock and categories.
- Customer details and address collection.
- Product variants as required by the Client.

3.2 Admin Panel

- Dashboard with revenue, orders, customers, products, charts and order-status overview.
- Product management: add, edit, archive/delete, images, price/discount, stock, category and activation status.
- Order management: viewing, searching/filtering, order details, customer information, products/quantities, amounts, payment status, shipping address and order-status updates.
- Customer management: customer details, total orders, spending, last purchase and basic New/Returning segmentation.
- Inventory management: stock quantity, low-stock and out-of-stock notification in website.

3.3 Payment Integration

One Razorpay payment gateway integration is included. The intended flow is Customer → Checkout → Razorpay → Payment Confirmation → Order Creation → Admin Dashboard. Razorpay account creation/KYC is the Client's responsibility; Comfinity may assist the Client with the technical integration and setup.

Payment gateway transaction charges and other charges imposed by Razorpay are payable by the Client.

3.4 Basic Analytics & UTM Tracking

- Total revenue.
- Total orders.
- Average order value.
- Best-selling products.
- New customers and returning customers.
- Basic purchase funnel metrics where technically supported.
- Basic UTM-based source/campaign tracking as agreed for the MVP.

The analytics implementation is a basic application-level dashboard and is not a guarantee of analytics accuracy under every browser, privacy setting, ad blocker or third-party environment.

3.5 Email Notifications

- Order confirmation email.
- Order shipped email.

- Order delivered email.

Any paid email provider, SMTP service, sending quota or other third-party email cost is payable by the Client.

3.6 Basic SEO

- Page titles and meta descriptions.
- SEO-friendly URLs.
- Sitemap and robots.txt configuration where applicable.
- Basic heading structure.
- Basic image alt-text implementation where content is supplied.
- Basic search-engine indexing configuration.

SEO services do not include keyword research campaigns, backlink building, content marketing, ongoing SEO management or any ranking guarantee.

3.7 Deployment

- Frontend deployment assistance.
- Backend deployment assistance.
- PostgreSQL database setup on the selected Hostinger VPS environment.
- SSL/HTTPS configuration assistance where supported by the selected hosting setup.
- Basic production configuration.
- Basic domain connection assistance.

4. Commercial Agreement

Total agreed development fee: ₹25,000.

The above amount is the agreed project development fee. No separate GST amount is being added to the stated ₹25,000 in this Agreement.

The Client has selected Hostinger VPS KVM 1 for hosting the frontend/backend environment and will purchase the hosting directly under the Client's own account.

5. Payment Terms

- Token Advance: ₹15,000 payable before commencement of development. This amount is non-refundable once development has commenced, except where otherwise agreed in writing.
- Final Payment: ₹10,000 payable after project handover.
- Source code and final handover materials will be released only after full payment of all amounts due under this Agreement.
- If payment is delayed, Comfinity may pause development and/or handover until outstanding amounts are cleared.
- If the Client stops or cancels the project after development has commenced, the Client remains responsible for payment for work completed, and the token advance remains non-refundable.

6. Timeline

The estimated development timeline is 2 weeks (working days) from acceptance of the project/quotation by email and subject to timely receipt of the Client's required materials, credentials, approvals, product information, content, hosting access and payment.

The timeline is an estimate rather than an absolute completion guarantee where delays are caused by the Client, third-party providers, hosting limitations, payment gateway approval/KYC, unavailable APIs, DNS/domain issues or other circumstances outside Comfinity's reasonable control.

Any Client-caused delay will extend the project timeline by a corresponding reasonable period, together with any additional time required to resume work.

7. Third-Party Costs and Exclusions

All third-party costs are payable directly by the Client and are not included in the ₹25,000 development fee.

- Hosting and any future hosting/server upgrade costs.
- Domain registration and renewal.
- PostgreSQL infrastructure costs, if separately charged by the hosting/provider.
- Razorpay transaction/payment-processing charges.
- Email provider/SMTP charges, if any.
- Shiprocket charges and other shipping/courier costs.
- WhatsApp API/SMS/API charges, if used.
- Cloud storage, CDN or other paid infrastructure/services, if used.
- Any other third-party subscription, API, license or usage charge.

Shiprocket integration may be accommodated within the MVP only to the extent specifically agreed and technically feasible within the existing scope. Any substantial API implementation, automation, advanced tracking, custom shipping logic or additional work may require a separate quotation.

8. Change Request Policy

The agreed fee covers the scope stated in this Agreement and the accepted technical scope. A Change Request includes any new feature, materially changed workflow, additional page/module, new third-party integration, substantial database change, redesign after approval, or functionality not reasonably included in the agreed scope.

Minor corrections to implemented functionality and reasonable design revisions within the agreed scope are included. Up to two reasonable revision rounds are included during design/staging review.

Additional work resulting from Change Requests will be discussed and quoted separately before implementation. Comfinity is not required to begin separately chargeable work without Client approval.

9. Client Responsibilities

- Provide accurate business information, product information, product images, pricing, categories, variants and other required content.
- Provide logo/branding assets and required website content.
- Provide legally appropriate Privacy Policy, Terms & Conditions, Refund Policy, Shipping Policy and other required legal/business content.
- Purchase and maintain the Hostinger VPS KVM 1 plan under the Client's own account.
- Purchase and maintain the domain under the Client's own account.
- Complete Razorpay account creation, KYC and business verification.
- Provide required hosting, domain, payment gateway, email and other credentials/access in a timely manner.
- Review staging builds and provide consolidated feedback within the agreed review period.
- Ensure that Client-provided content, images, trademarks and data may legally be used.
- Pay all third-party service and infrastructure charges.
- Billing template

The Client remains responsible for the legal accuracy and suitability of its business policies and customer-facing legal content. Comfinity does not provide legal advice.

10. Testing and Acceptance

After delivery of the staging/production-ready version, the Client will have 10 calendar days to identify material defects against the agreed scope.

A "Defect" means a failure of an implemented feature to operate substantially in accordance with the agreed specifications. A change of preference, newly requested functionality or altered business requirement is not a Defect and will be treated as a Change Request.

If no material scope-related defects are reported within the 10-days acceptance period, the deliverables will be deemed accepted.

Comfinity will make reasonable corrections to valid defects within the agreed scope. Acceptance does not prevent the Client from using the warranty process for valid defects discovered within the warranty period.

11. Warranty Support

Comfinity will provide a 30-day limited warranty period beginning from final deployment/acceptance.

The warranty covers correction of reproducible bugs in features implemented within the agreed scope.

The warranty does not cover new features, design changes, Client-requested modifications, third-party API/service changes, payment gateway failures, hosting/provider outages, DNS/domain problems caused by third parties, infrastructure upgrades, problems caused by Client modifications, compromised credentials, or issues arising from changes made by persons other than Comfinity.

Support or maintenance requested after the warranty period will be separately chargeable based on the nature and extent of the work.

12. Source Code and Handover

Upon receipt of the full agreed development fee, Comfinity will provide the project-specific source code and reasonable handover materials, including, where applicable:

- Customer website frontend source code.
- Admin panel source code.
- Backend source code.
- Database schema and relevant setup information.
- API/configuration documentation reasonably required for handover.
- Environment-variable template/configuration guidance where applicable.
- Reasonable deployment/handover instructions.

Third-party software, open-source packages, frameworks, libraries, generic reusable components, pre-existing Comfinity materials, internal development tools, know-how and intellectual property not created specifically for the Client remain subject to their respective ownership/licensing terms.

Upon full payment, ownership of the custom project-specific source code and deliverables created specifically for Jacral under this Agreement will transfer to the Client, subject to the rights and licenses of third-party/open-source components.

13. Hosting, Infrastructure and Deployment Responsibility

The Client has selected Hostinger VPS KVM 1 for hosting. The Client will own the Hostinger account and remain responsible for subscription payments, renewal, resource limits and infrastructure upgrades.

Comfinity will provide reasonable deployment assistance within the agreed scope. If the selected hosting environment becomes inadequate, requires a plan upgrade, migration, additional server configuration, managed infrastructure, performance engineering or other infrastructure work beyond the agreed deployment scope, the Client will bear the related third-party costs and any additional professional fees agreed for such work.

Comfinity is not responsible for service interruptions, performance limitations, data loss or failures caused by the hosting provider, third-party infrastructure, network failures or Client-controlled infrastructure.

14. Database, Backup and Data Responsibility

PostgreSQL will be used as the primary application database and will be hosted on the selected Hostinger VPS environment. The Client will bear the infrastructure cost associated with the database.

Where technically supported by the selected infrastructure, Comfinity will configure basic backup functionality as part of deployment. Long-term backup retention, disaster recovery infrastructure, advanced

backup architecture and restoration services beyond reasonable deployment/warranty support are not included unless separately agreed.

The Client is responsible for maintaining appropriate access controls and account ownership for production infrastructure after handover.

15. Security

Comfinity will implement reasonable application-security measures within the agreed MVP scope, including HTTPS/SSL configuration assistance, separate customer/admin authentication, role-based access controls where applicable, secure payment-gateway redirection/integration, and MFA for admin access as agreed.

Security measures reduce risk but cannot guarantee that the application, hosting environment or third-party services will be completely immune from cyberattack, unauthorized access, malware, vulnerabilities or service disruption.

The Client is responsible for maintaining secure credentials, limiting access to authorized personnel, renewing infrastructure/services and promptly informing Comfinity of suspected security incidents.

16. Third-Party Services

The project depends on third-party services including hosting, payment processing, email and potentially shipping/API services. Such services are governed by their own terms, availability and pricing.

Comfinity will not be responsible for downtime, API changes, account suspension, approval delays, pricing changes, service limitations or failures attributable to third-party providers.

17. Confidentiality

Each party agrees to keep confidential non-public business, technical and commercial information received from the other party in connection with the project and to use such information only for purposes connected with the project.

Confidential information includes, without limitation, source code, credentials, customer information, business information, pricing, technical architecture, product information and internal documents.

This obligation does not apply to information that is publicly available without breach, was lawfully known before disclosure, is independently developed, or must be disclosed by law.

18. Data Protection and Legal Compliance

The Client is responsible for determining and maintaining the legal basis, notices, consent requirements, privacy policies and business compliance obligations applicable to its collection and processing of customer data.

Comfinity will implement the technical functionality based on the agreed requirements but does not provide legal, regulatory or compliance advice.

Comfinity will not be responsible for legal or regulatory consequences arising from Client-provided policies, content, business practices, data collection purposes or instructions.

19. Limitation of Liability

To the maximum extent permitted by applicable law, Comfinity's aggregate liability arising out of or relating to this project or Agreement will not exceed the total development fees actually paid by the Client to Comfinity under this Agreement.

To the maximum extent permitted by applicable law, Comfinity will not be liable for indirect, incidental, special, consequential or punitive losses, including loss of profits, revenue, business opportunities, goodwill or anticipated savings.

Nothing in this Agreement is intended to exclude liability that cannot legally be excluded.

20. Termination

Either party may terminate the project in the event of a material breach that remains unresolved after reasonable written notice.

If the Client terminates after development has commenced, the token advance remains non-refundable and the Client will be responsible for agreed amounts relating to work completed up to termination.

If termination occurs due to Client non-payment or failure to provide required materials/access, Comfinity may suspend work and withhold source code and final handover until outstanding amounts are settled.

If Comfinity terminates due to its own material breach, the parties will reasonably determine the appropriate settlement for completed work and amounts already paid, subject to applicable law.

21. Project Communication and Approvals

Email approval, written confirmation or other written communication from an authorized Client representative may be used to confirm project acceptance, scope decisions, approvals and Change Requests.

The Client should provide consolidated feedback through the agreed communication channel to avoid conflicting instructions and unnecessary delays.

22. Ownership of Client Materials

The Client retains ownership of its trademarks, logos, product content, images, business information and other materials supplied to Comfinity.

The Client grants Comfinity the limited right to use such materials solely to perform the project.

23. General Terms

- This Agreement and the accepted technical scope constitute the understanding between the parties regarding the project development described herein.
- Any amendment to the commercial scope or material project terms should be confirmed in writing by both parties.
- If any provision is found unenforceable, the remaining provisions will continue to the extent permitted by law.
- The parties are independent contracting parties; this Agreement does not create a partnership, joint venture or employment relationship.
- The project is an MVP development engagement and does not include features expressly excluded or not listed in the agreed scope.

24. Signatures

By signing below, both parties confirm that they have read, understood and agreed to the commercial and project terms of this Agreement.
